实验报告要求: 1.实验目的 2.实验内容(题目描述,源代码,运行截图,调试情况) 3.实验体会

# 一、实验目的

- 1. 认识了解 c++基本语法。
- 2. 掌握条件语句和循环语句
- 3. 掌握数组和字符串的表达。
- 4. 掌握类的基本用法。

# 二、实验内容

#### 1、第一题

## 1.1 题目描述

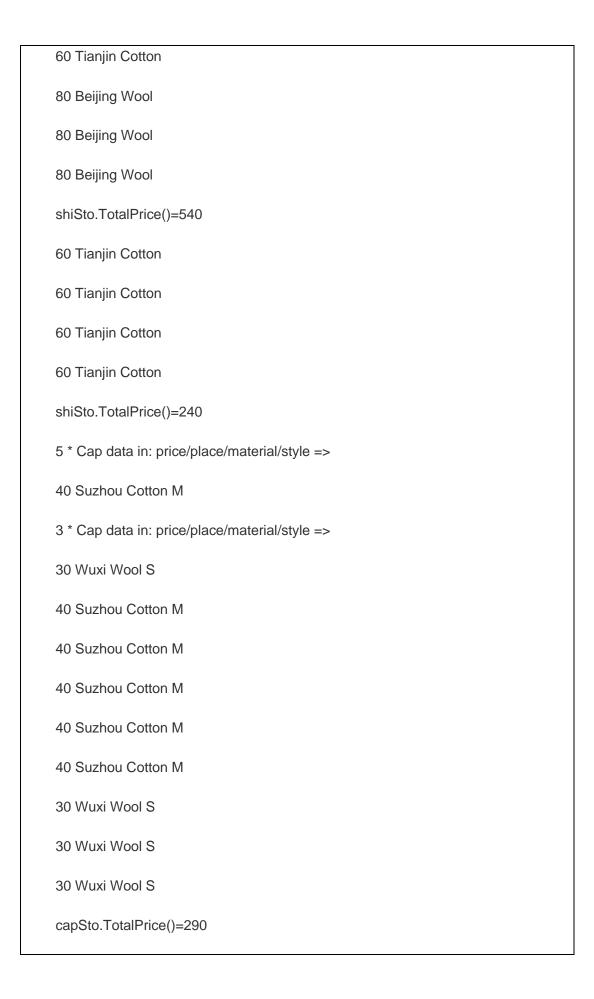

### A. 问题描述

对本章示范题的用于管理商店商品的实现程序进行完善:完成 Wardrobe 立柜类的具体定义与使用,并添加"帽子仓库类"以及"立柜仓库类"的定义及使用,以使程序能够对商店的这三种商品(衬衣、帽子、立柜)进行简单的管理与应用。

要对商品实现的操作有:商品的进库(增加某类商品及其库存量),商品的出库(减少某类商品及其库存量),以及某类商品总价格的计算。

最终显示效果: (红色部分是输入数据)

- 5 \* shirt data in: price/place/material =>
- 60 Tianjin Cotton
- 3 \* shirt data in: price/place/material =>
- 80 Beijing Wool
- 60 Tianjin Cotton
- 60 Tianjin Cotton
- 60 Tianjin Cotton
- 60 Tianjin Cotton

```
40 Suzhou Cotton M
40 Suzhou Cotton M
40 Suzhou Cotton M
40 Suzhou Cotton M
capSto.TotalPrice()=160
5 * Wardrobe data in: price/place/material/color =>
160 Guangzhou Pine Yellow
3 * Wardrobe data in: price/place/material/color =>
200 Suzhou Oak Brown
160 Guangzhou Pine Yellow
200 Suzhou Oak Brown
200 Suzhou Oak Brown
200 Suzhou Oak Brown
WarSto.TotalPrice()=1400
160 Guangzhou Pine Yellow
160 Guangzhou Pine Yellow
160 Guangzhou Pine Yellow
160 Guangzhou Pine Yellow
WarSto.TotalPrice()=640
B. 输入
```

```
60 Tianjin Cotton
80 Beijing Wool
40 Suzhou Cotton M
30 Wuxi Wool S
```

160 Guangzhou Pine Yellow

200 Suzhou Oak Brown

C. 输出

5 \* shirt data in: price/place/material =>

3 \* shirt data in: price/place/material =>

60 Tianjin Cotton

80 Beijing Wool

80 Beijing Wool

80 Beijing Wool

#### 1.4 调试情况

## 2、第二题

#### 2.1 题目描述

A. 问题描述、

利用继承性与派生类来管理学生教师档案:由 Person(人员)类出发(作为基类),派生出 Student(学生)及 Teacher(教师)类;而后又由 Student(学生)类出发(作为基类),派生出 GraduateStudent(研究生)类。可假定这几个类各自具有的数据成员为:

Person(人员)类:姓名、性别、年龄;

Student (学生)类:姓名、性别、年龄、学号、系别;

Teacher (教师)类:姓名、性别、年龄、职称、担任课程;

GraduateStudent (研究生) 类: 姓名、性别、年龄、学号、系别、导师。

为简化起见,每个类可只设立构造函数以及显示类对象数据的成员函数 Print。而后编制简单的主函数,说明上述有关的类对象,并对其类成员函数进行简单使用(调用)

```
B. 输出
```

```
== per1.Display() => name,age,sex sun 42 M
```

== stu1.Display() => name,age,sex,Reg\_Number,department

guo 22 F 1001 comp
== teach1 Display() => name age sey course nos

== teach1.Display() => name,age,sex,course,post fang 38 M english professor

== gStu.Display() => name,age,sex,Reg Number,department,advisor

```
wu 25 M 1021 comp wei

2.3 运行截图
```

#### 2.4 调试情况

#### 3、第三题

#### 3.1 题目描述

public:

#### A. 问题描述

自定义一个日期时间类 DateTimeType,它含有类 DateType 与类 TimeType 的类对象作为其数据成员,并具有所列的其他几个成员函数。而后编制主函数,说明 DateTimeType 的类对象,并对其成员函数以及二对象成员所属类的公有成员函数进行使用。

class DateTimeType { //自定义的日期时间类 DateTimeType

DateType date; //类 DateType 的类对象 date 作为其数据成员

TimeType time; //类 TimeType 的类对象 time 作为其另一个数据成员

DateTimeType(int y0=1, int m0=1, int d0=1, int hr0=0, int mi0=0, int se0=0);

//构造函数,设定 DateTimeType 类对象的日期时间,并为各参数设置了默认值

DateType& GetDate(){ return date; } //返回本类的私有数据对象 data

TimeType& GetTime(){ return time; } //返回本类的私有数据对象 time

void IncrementSecond(int s); //增加若干秒,注意"进位"问题

void PrintDateTime(); //屏幕输出日期时间对象的有关数据

**}**;

注意,每一个 DateTimeType 类对象中总包含有一个 DateType 类对象(对象成 员)以及一个 TimeType 类对象(对象成员),编制与实现本程序时,也必须包含 DateType 与 TimeType 自定义类(类型)。

之所以设置了公有的类成员函数 GetDate 与 GetTime, 是为类外如主函数处使用该 类的私有数据成员 date 与 time 提供方便(否则的话,类外无法直接访问该类的私有数 据成员)。另外,两成员函数返回的都为引用,为的是可将返回对象当作一个独立变量

```
来使用(如可以继续作左值等)。例如,假设编制了如下形式的主函数:
   void main() {
   DateTimeType dttm1(1999,12,31,23,59,59), dttm2;
   (dttm1.GetDate()).PrintDate(); //调用对象成员所属类的公有成员函数
   cout<<endl;
   dttm1.PrintDateTime(); //调用本派生类的成员函数 PrintDateTime
   dttm2.PrintDateTime();
   dttm1.IncrementSecond(30);//调用本派生类成员函数
   dttm1.PrintDateTime();
   }
    B. 输出
    1999-12-31
    1999-12-31 23:59:59
    1-1-1 0:0:0
    2000-1-1 0:0:29
3.2 源代码
#include iostream>
using namespace std;
class DateType
public:
   int year;
   int month;
   int day;
   DateType(int y, int m, int d)
      year = y; month = m; day = d;
```

```
void PrintDate()
       cout << year << "-" << month << "-" << day << endl;
   }
};
class TimeType
public:
   int hour;
   int minute;
   int second;
   TimeType(int h, int m, int s)
       hour = h; minute = m; second = s;
};
class DateTimeType
   DateType date;
   TimeType time;
public:
   DateTimeType(int y0 = 1, int m0 = 1, int d0 = 1, int hr0 = 0, int mi0 = 0, int
se0 = 0) : date(y0, m0, d0), time(hr0, mi0, se0) {}
   DateType& GetDate()
       return date;
   TimeType& GetTime()
       return time;
   void IncrementSecond(int s);
   void PrintDateTime()
        cout << date. year << "-" << date. month << "-" << date. day << " " << time. hour
<<":" << time.minute <<":" << time.second << endl;
   }
};
void DateTimeType::IncrementSecond(int s)
   int& m = date.month;
   time.second += s;
```

```
if (time.second >= 60)
    {
        time.minute += time.second / 60;
        time.second = time.second % 60;
        if (time.minute >= 60)
            time.hour += time.minute / 60;
            time.minute = time.minute % 60;
            if (time.hour > 23)
                time.hour = time.hour - 24;
                date. day++;
                if ((m == 1 || m == 3 || m == 5 || m == 7 || m == 8 || m == 10) &&
date.day == 32)
                {
                    m++;
                    date.day = 1;
                if ((m == 4 || m == 6 || m == 9 || m == 11) && date.day == 31)
                    m++;
                    date.day = 1;
                if (m == 12 && date.day == 32)
                    m = 1;
                    date.year++;
                    date.day = 1;
                if ((date.year % 4 == 0 && date.year % 100 != 0) || date.year % 400
== 0)
                    if (m == 2 && date.day == 30)
                        m++;
                        date.day = 1;
                }
                else
                    if (m == 2 && date.day == 29)
                    {
                        m++;
                        date.day = 1;
```

# 3.4 调试情况

# 三、实验体会

通过这次实验,我更加明白了 c++理论中的一些编程规范和 c++语言特性,掌握了基本编程知识,以后会更加认真的学习 c++理论知识,并不断实践和练习,在 debug 中不断学习。
